## Research Experience

### UW NLP Research Group

ADVISORS: MARI OSTENDORF & HANNANEH HAJISHIRZI

- Proposed a new text-to-data task, **document summarization using structured relational graphs**, together with evaluation metrics for the task. Implemented and assessed strong baselines as well as a new approach based on graph learning.
- Proposed to apply dialogue state tracking techniques to do early **conversations summarization with structures**, which would be used for response generation in the target conversation.
- Built a **grounded response generation system** by leveraging question-answering techniques to identify salient information from grounding for response generation.

Seattle, WA

Fall 2018 – Present

## Microsoft Research NLP Team

Redmond, WA

MENTORS: MICHEL GALLEY & BILL DOLAN

Summer 2019 & Summer 2020

- Proposed the task and evaluation metrics of **template generation** from previously written documents as the first step towards building interactive document writing systems, and built strong baselines with weak supervision.
- Built a **controllable and knowledge-grounded dialogue response generation model** and analyzed how adding control and grounding leads to better generated responses.

## UIUC Data Mining Research Group

Urbana, IL

ADVISOR: JIAWEI HAN

Fall 2016 – Spring 2018

- Improved **distantly supervised information extraction** (detection/classification of entities and relation triples in unstructured text corpora), which replaces human annotation with linking to knowledge bases, by developing noise-robust systems that extract entities and relations.
- Designed and built systems that facilitate automatic **faceted taxonomy construction** from any given text corpus in scientific domains, with a small number of user-provided seed examples.

## UIUC MRI Lab

Urbana, IL

ADVISOR: ZHI-PEI LIANG

Spring 2012 - Summer 2012

- Applied signal processing techniques to optimize real-time cardiac image reconstruction and de-noise dynamic MRI.
